To whom it may concern:

- Titan Global provides comprehensive security and is comprised of over 1,000 active and retired NYPD and Suffolk County officers. It provides consulting services, investigative services, security operations, special operations (aviation, maritime, canine), and training & education.
- Titan Global officers additionally provide critical medical aid during mass casualty situations.
- Titan HST technology is used by the officers at public large-scale events including, but not limited to, the Rockefeller Center Christmas Tree Lighting.
- The Titan Global officers utilize Titan HST's network-dependent technologies, such as Augmented Reality and Safety Check-In, as well as off-network technologies such as dual-channel mesh networking to keep communication available and constant during events with congested/overloaded networks.
- Titan HST is also used by their officers to help secure marquee sites including: Nassau Coliseum, Barclays Center, Jones Beach Theater, and Madison Square Garden.

Dear Present or Future Titan HST User:

It is with great enthusiasm and confidence that I recommend Titan HST and its mass 2-way emergency communication platform.

As a former City Manager for over 29 years, spanning multiple California cities including Newport Beach, Coronado, Avenal, and Rialto and as former President of both the San Diego County and Orange County City Managers' Associations, I have decades of experience in the unique challenges government agencies face in ensuring safety, security, and continuity of operations on both a daily basis and during catastrophic emergencies – natural disaster and man-made.

Titan HST helps achieve multiple local goals, including keeping employees and staff safe, helping update residents with information, and perhaps most critically, assisting in the mobilization of Emergency Operation Centers during times of crisis.

Titan HST increases information dissemination and reduces response time by utilizing multiple channels of communication. In many circumstances, Titan HST is able to reduce emergency response time by over 50% while providing more reliability than traditional methods of emergency communication.

In my many years serving in government, I have seen a vast and wide range of products, tools, and systems. I can state definitively, that Titan HST is unlike anything else I have come across and seemingly competes only against itself as it always raises the bar with the technology it endlessly deploys. Specific, key features that I believe can be imperative during an emergency include augmented reality which allows you to see through no visibility situations where people need help or are trapped during an emergency, real-time translations which eliminate potential language barriers during an emergency saving precious time, and redundant connectivity allowing multiple methods to communicate during an emergency even when other systems can't function!

I strongly recommend using Titan HST to help keep everyone safe and government agencies operational during emergencies.

Sincerely,

Homer Bludau
Former City Manager,
City of Newport Beach, California

Recommendation to Utilize Titan HST:

I have served as a police officer for 26 years and spent 7 years prior to that serving in the military, where my focus was on infrastructure and asset security. While in law enforcement, I spent time as a background investigator, hostage negotiator, threat assessment professional, and crisis manager, among many other duties, tasks, and assignments. In addition, I have spent 11 years working in SVU, with a subset of that time also dedicated to safety and security of staff and students on school campuses. I routinely educate safety professionals on how to create safety plans and also how to address active shooter incidents.

Navigating critical incidents was a routine part of my duties. I can unequivocally state that one of the biggest challenges sites face is obtaining credible emergency information in a timely manner. Without comprehensive and specific information, action is often delayed since it is still unclear what the best method of action may be. Accordingly, historically, after-action reports of these critical incidents tend to demand detailed planning, implementation of protocols, and highlight a need for better communication and better communication methods.

I became aware of Titan HST when it was integrated in to one of the sites I patrolled. After use and analysis of its functions, I discovered that it provides the missing link of much-needed crisis management communication and support. Titan HST is versatile and has been customized in its deployment for the specific needs of each site I patrolled. It provides quick and effective communication resulting, among other benefits, in the diminishment of the opportunity and abilities of potential assailants by enhancing organizations' emergency response capabilities. The system also addresses many human shortcomings, such as by allowing preset messages, which minimizes the level of input required from an individual in a time of stress during a pending emergency.

Titan HST puts theory and science in to something practical and efficient in order to save lives by decreasing the vulnerability and inadequacy of sites.

Sincerely,

Vladimir A. Anderson
Former Master Officer
City of Newport Beach, California

Dear Businesses, Educators, Government Agencies & Users:

It gives me a great deal of professional and personal pleasure to endorse and recommend the Titan Health & Security Technologies, Inc. 2-way mass emergency communication security and safety system.

As a former teacher, principal, superintendent, county superintendent and California's Secretary of Education, I have had multiple opportunities to observe and use many campus safety programs.

The Titan HST emergency communication security platform offers the most comprehensive, instantaneous, simple and effective tools that I have observed and field-tested. The on-campus results are a true testimony to its value in enhancing school safety. Specifically, the 50% reduction in emergency response times is invaluable during emergency situations and often times life-saving.

The system offers reliability even in incidents where other forms of communication fail, including 911. I have seen this myself during power outages.

Titan HST is unique because it was developed with the input of local schools, businesses, government agencies and police. One noteworthy and unique feature that resulted from such collaboration is the emergency one-touch campus-wide lockdown. Titan HST offers a simple yet comprehensive emergency communication network that can be infinitely customized to meet the individual needs of any campus-public or private, small or large.

Titan HST's ability to utilize crowdsourced data and Augmented Reality gives administrators the power to "see through walls," whether actual building walls, or metaphoric walls of smoke and fire, and even provides floor level, to help find where to send help. I have yet to see an emergency system that can provide this level of security to school administrators.

Titan HST is a cutting-edge system essential for ensuring the safety of our children.

I highly recommend the use of the Titan HST system to ensure the safety and security of our nation's schools – an outcome essential for our students, teachers, faculty, staff and parents to succeed in their future endeavors.

Sincerely,

David Long
